

Settings

Document Revision 2.01

The **Settings** Tab supports the configuration of various ad tag parameters.

- 1 Ad Tag Configurations

CAUTION

Do not navigate to another tab (or log out) until you have saved your changes. Otherwise, they will be lost.

Ad Tag Configurations

1. Navigate to *Setup* --> *Settings*.
2. The following screen will display.

3. Modify the settings as needed.
 - a. *Default to Secure Ad Tag (HTTPS)*: This option controls the default setting of the *Secure Ad Tag* field (in the IMPLEMENTATION AND CODE section) when you create a new ad tag, *and modify an existing ad tag*. A value of *On* indicates you wish to set the **default** to secure all tags via HTTPS protocol.
 - > This setting is recommended for ads originating from secure environments.
 - > To default to Secure Ad Tag (HTTPS), click *Off*, per the toggle shown below. The displayed value indicates the **current** setting.

HINT

To turn off defaulting to Secure Ad Tag, click *On*, per the toggle shown below. The displayed value indicates the **current** setting.

4. Review your settings and make any necessary corrections.
5. If you made a mistake and need to back out your changes, click

at the top of the screen. (Scroll up if you do not see this button.)

6. Otherwise, click

at the top of the screen. (Scroll up if you do not see this button.)
